Product Description

Because Wavin PE soil and waste systems are fused, joints remain secure even under tensile stress. Polyethylene is highly resistant to chemicals, making this the ideal choice in hospitals, laboratories and industrial environments. Wavin PE is durable at extreme temperatures too – even at minus 40°C our pipes offer excellent impact resistance. You can join pipes and fittings using both butt welding and electro-fusion couplers. Our hand-held WaviDuo welder gives easy access for difficult installations – letting you use one tool for the full range of diameters where most other systems require two. **Comprehensive choice** The Wavin PE soil and waste range offers an exceptional choice of pipes and fittings. Choose from pipe diameters from 32-400 mm – meeting all requirements from a single range for even the most complex jobs, like 60-storey high rise buildings.
